Summary

Experienced Flutter Developer with nearly 5 years in building and maintaining production-grade mobile applications for iOS and Android. Expertise in Flutter/Dart, REST API integration, Firebase, and database management. Skilled in troubleshooting production issues and delivering scalable solutions. Currently enhancing backend and full-stack capabilities with Python and FastAPI.

Experience

Senior Flutter Developer: Team lead Jan 2025 — Present
Akwad Qatar
Remote

Flutter Developer Jul 2024 — Nov 2024
RaQi co Syria
On Site

Flutter developer Feb 2023 — Jul 2024
Appa Group Syria
On Site

Full Stack Mobile developer Nov 2021 — Present
Freelance Projects

Languages

Mother tongue(s): Arabic

Other language(s): English

Education

Information Technology (BAIT) Apr 2021 — Jan 2027
University Syria

Skills

Mobile Development
Flutter Dart Android iOS Swift Kotlin

Architecture
Clean Architecture SOLID OOP feature-based architecture.

State Mangement
Riverpod Bloc/Cubit Provider

API & Backend Integration
REST APIs Dio Firebase Socket.IO.

Backend Development
Python FastAPI Node.js/Express.js.

Databases
MySQL MongoDB. Supabase Firebase

Tools
Git GitHub Gitlab.

Testing & Quality

Unit Testing | debugging | production troubleshooting | Problem-solving | Team collaboration

Projects

Meat Empire:
Collaborated with another developer to build a meat-shopping application using Clean Architecture.

AppStore | Google play

Widam:
Collaborated with another developer to maintain and enhance a meat-shopping application. Worked on feature additions, bug fixes, and updates to existing functionality using Clean Architecture.

AppStore | GooglePlay

Ehtezam:

AppStore

- Contributed to customer and driver applications for roadside assistance and vehicle towing, following Clean Architecture principles.
- Supported three request flows: quick orders, QR-code requests, and price offers.
- Integrated real-time communication using Socket.IO. Implemented Firebase notifications and Google Maps integration.

Saba app
A field sales and delivery management application supporting Vansell, Salesman, and Driver roles. Supports order creation and customer management, including supermarket connections. Provides inventory-tracking capabilities. Supports field delivery workflows for different user roles.

souq oqaz
An online marketplace for buying and selling products, with a bidding feature for listed advertisements.

AppStore | GooglePlay

High class services
Collaborated with another developer on a service-booking and task-management platform using Clean Architecture. Supported service scheduling by date and time, cost calculations, and discounts. Worked on supervisor and driver application workflows for task assignment and service delivery. Integrated Firebase notifications for order updates.

GooglePlayClientApp | GooglePlayDriverApp

TechTrivia
Quiz game Contributed to the development of a quiz application using Clean Architecture.

GooglePlay

Exhibition app
Contributed to the development of a cultural tour guide application as part of a team, following Clean Architecture principles.

GooglePlay

Socail App
Built a social networking application using Dart, Flutter, Firebase, and Cloud Firestore.

Enabled users to publish posts, browse feeds, like posts, and comment. Added messaging and friend connections. Supported editing personal profile information.

Restaurants booking app
Contributed to the development of a restaurant-booking application, following Clean Architecture principles.

Invite app
An application listed in the original project list. Further project details were not provided.

IpTv app
Contributed to the development of an IPTV application using Clean Architecture.

I MTN App
Contributed to the development of the iMTN mobile application using Clean Architecture.

> WebApp

Orders Delivery with driver App

- Contributed to the development of an order-delivery application using Clean Architecture.
- Driver app Independently developed a driver application using Clean Architecture.

Radio app
Contributed to the development of a radio application using Clean Architecture.

music app
Collaborated with the Appa Group team to develop a music application using Clean Architecture.

Wedding App
Contributed to a wedding guest check-in application featuring QR-code verification, built with Riverpod and Clean Architecture.

CRUDS App with Mongo DB
Built a CRUD application using Node.js, Express.js, and MongoDB.

Finance Project
A finance application developed with a Python/FastAPI backend.
